

The Caring Containment Professionals.™

ProLite® RECEIVER

*Successful training starts with a
PetSafe® Pro™ ProLite Receiver.*

PetSafe Pro ProLite Receiver Features:

No other receiver on the market today offers as many features as the PetSafe® ProLite®. Our product development team has created an innovative product that packs state of the art electronic technology into the lightest weight receiver you can find. Its range of settings and programs make training easier for you and your pet. Professional trainers across the country agree – ProLite is the smart choice. Because training is one of the most important parts to the success of a containment system, the PetSafe® Pro™ Brand is proud to offer the only pet containment training to have received the IACP (International Association of Canine Professionals) Seal of Approval for its Gentle LiteTouch™ Training.

- Advanced digital technology ensures your pet's safety and your peace of mind.
- 10 different correction levels and three additional training settings allow you to customize for each individual pet, based on size and temperament.
- Anti-linger and progressive correction will stop your pet from hanging out in the boundary zone and running down batteries.
- No run through detects the speed in which your pet is traveling through the boundary zone. The further into the boundary zone, the higher the correction becomes. The ProLite will also deliver a correction for 7 seconds if the pet has bolted through the boundary.
- Safety "time out" will shut off the receiver for as long as your pet is in the boundary zone.
- SafeLite™ low battery indicator keeps you from guessing when to change the batteries.
- Our ProLite receiver collar weighs in at 1.4 ounces with batteries, making it a perfect fit for small breed dogs and cats.
- Waterproof.
- ISO 9002 factory certification guarantees the highest quality.
- Lifetime transferable warranty.
