

The Caring Containment Professionals.™

Lightning PROTECTOR

Take your pet's protection to the next level
with a PetSafe® Pro™ Lightning Protector

PetSafe Pro Lightning Protector Features:

When the unexpected happens – like lightning strikes or power surges – your pet's security could be at risk. With a PetSafe® Pro™ Lightning Protector, you can rest easy even during the most intense thunderstorm knowing that your containment system is safe from Mother Nature's fury. And that means that your pets are safe as well.

- Safeguards your equipment against most surges.
- Completely disconnects AC power to connected equipment in the event of a catastrophic surge.
- Large capacity to dissipate surges.
- Reduces the risk of system failure by protecting the transmitter so it can continue to keep the pet inside the designated boundary zone.
- Space saving design that plugs directly into the wall; the transformer plugs into the side of the unit for better balance and stability.
- Convenient extra outlet.
- Easy-to-see power indicator light.
- Positive loop connectors make it easy to attach the loop wire to the unit, firmly securing them in place.
- Lifetime transferable warranty.

“In January of 1999, I began including the PetSafe Pro Lightning Protector – on every system I installed, and since then, not a single transmitter or transformer sold has failed from either a lightning strike or power surge.

My prospective customers are educated and look for clear, distinct advantages in choosing an underground fence company. The PetSafe Pro Lightning Protector is one of these advantages.”
